Occupations

- Imagine we have some information about people and their occupations (and where that information is derived from)
- How might we define an ontology to allow us to describe this data?
- What are the classes we need to represent?
- What are the properties or relationships that we need to describe?
- How can we map from spreadsheet data into some populated ontology?
- What queries can we then ask?

	A	B	C	D	E	F	G	H	I
1	Surname	Married Surname	Birth Year	Given Names	Year	Source	Occupation		
2	Bright		1862	Henry Edmund					
3						1871 census	scholar		
4						1881 census	captains steward		
5						1883 service record	stoke		
6						1885 marriage	stoke		
7						1886 service record	stoke		
8						1891 census	stoke		
9						1897 service record	leadir		
10						1898 service record	leadir		
11						1901 census	leadir		
12						1901 birth of son	leadir		
13						1903 service record	Royal		
14						1912 service record	retire		
15							Horse		
16							sweet		
17						1929 marriage of son	naval		
18						1936 death	pensi		
19	Hewett		1863	Charlotte					
20						1871 census	none		
21						1881 census	dome		
22						1891 census	none		
23						1901 census	none		
24						1911 census	none		
25	Bright		1901	William George					
26						family	slaug		
27						1911 census	schoc		
28						1929 marriage	butch		
29						1934 birth of son	journ		
30						1958 marriage of son	butch		
31						1982 death	retire		
32	Bright		1761	James					
33	Gulliver	Bright		Mary					
34	Bright		1787	James					
35						1841 census	sawyl		
36						1851 census	dockyard pensioner		

- Name of Person
 - Given Name
 - Surname
 - Possibly Married name
- Date of Birth
 - If known
- Occupation
 - Year
 - Source
 - (Additional Notes)
- Sex?

Modelling in OWL

- Recall that OWL allows us to describe
 - Individuals.
 - Classes (of Individuals).
 - Relationships between Individuals or Properties of Individuals.
- What are our Individuals here?
- What are the Classes
- What are the Properties/Relations?

Basic Data

- Each Person has
 - Given Name
 - Surname
 - Date of Birth
- Some Persons (Women) may also have
 - Married Surname
- OWL provides *Datatype* properties that allow us to associate data values with Individuals.
 - Strings, numbers etc.

Occupations

- We are assuming that we have a hierarchy of occupations or roles (not all of the things that people are listed as doing are necessarily occupations)
- This is a simple taxonomy.
- We might, at some point, be concerned about modelling this more completely, e.g. through descriptions of the roles, but for current purposes, an asserted hierarchy is fine.
- However, a key question is how we associate people with the occupations/roles that they are playing.

Modelling Occupations: Attempt #1

Class: Person

Class: Role

Class: Butcher

SubClassOf: Role

Individual: W.G.Bright

Types: Person, Butcher

Modelling Occupations: Attempt #2

Class: Person

Class: Role

Class: Butcher

SubClassOf: Role

ObjectProperty: hasRole

Individual: Butcher-1

Types: Butcher

Individual: W.G.Bright

Types: Person

Facts: hasRole Butcher-1

Named and Anonymous Individuals

- OWL allows us to make statements about particular named individuals.
- Fred has a cat called Tibbs.

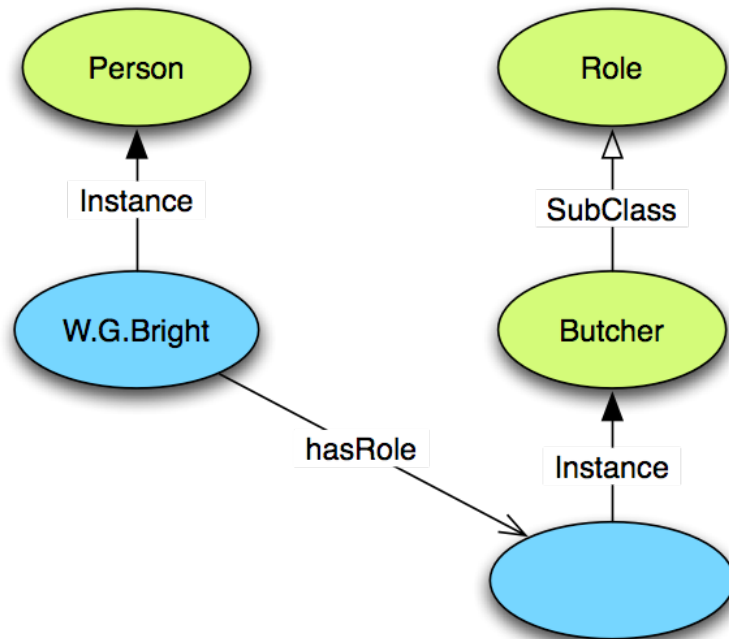

Individual: Fred
Types: Person
Facts: hasPet Tibbs

Individual: Tibbs
Types: Cat

- We can also refer to *anonymous* individuals
- Fred has a cat, but we don't know anything about it
- This representation of *incomplete* information can be useful when we don't know (or don't care) about the particular individual.

Individual: Fred
Types: Person that hasPet
some Cat

Modelling Occupations: Attempt #3

Class: Person

Class: Role

Class: Butcher

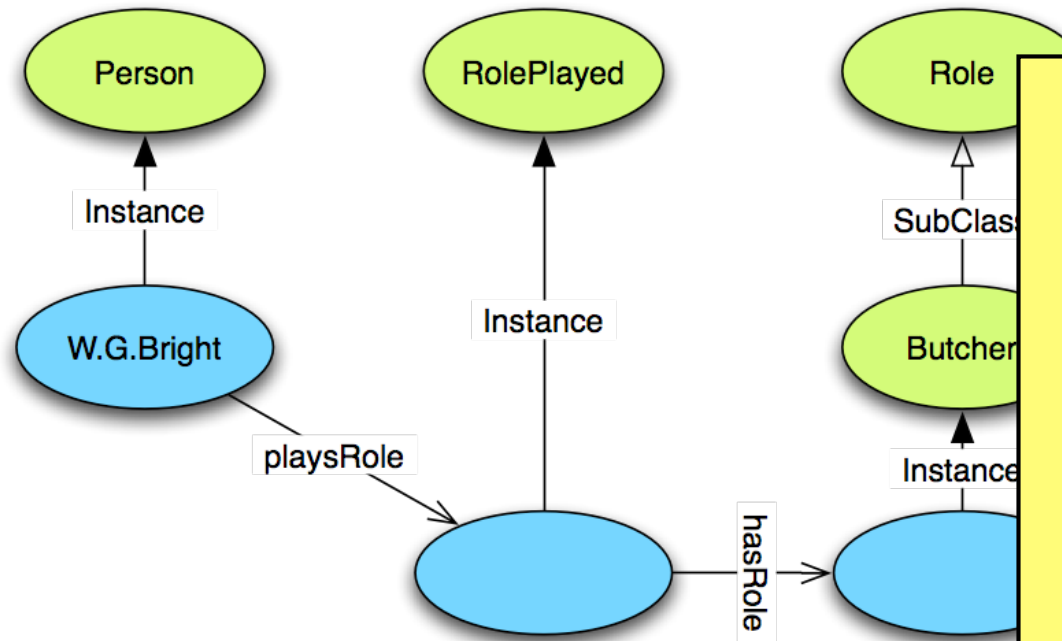

SubClassOf: Role

ObjectProperty: hasRole

Individual: W.G.Bright

Types: Person that hasRole some
Butcher

Modelling Occupations: Attempt #4

Class: Person
 Class: Role
 Class: Butcher
 SubClassOf: Role
 Class: RolePlayed

ObjectProperty: playsRole
 ObjectProperty: hasRole

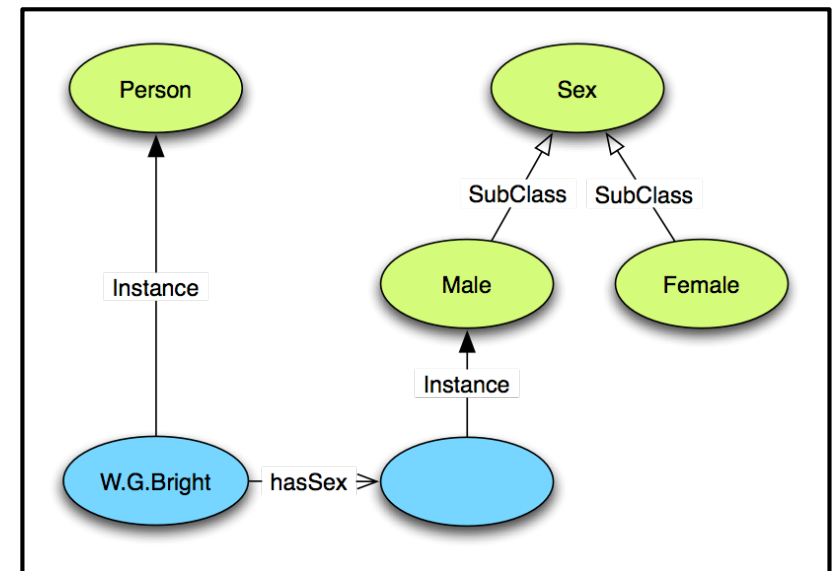

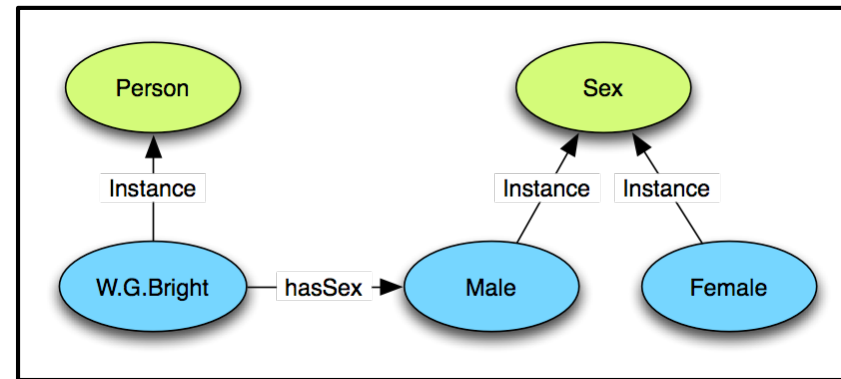

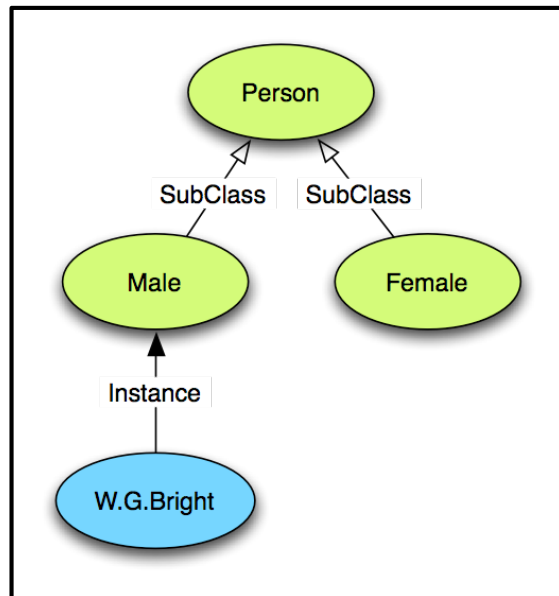

Individual: W.G.Bright
 Types: Person that playsRole some
 (RolePlayed that hasRole some
 Butcher)

Modelling Sex: Male and Female

- People are Male or Female
 - For the purposes of this model we will take a simplified view and not consider transgender/androgeny etc.
 - Thus every person is either Male or Female and not both

- A. Subclasses of Person Male, Female, with Individuals being asserted as instances of those classes
 - Disjointness and Covering Axioms
- B. Two distinct Individuals Male, Female with a functional ObjectProperty hasSex
- C. Classes Male, Female, a functional ObjectProperty hasSex with Individuals being asserted to be related to anonymous Individuals of those classes.
 - Disjointness and Covering Axioms

Modelling Male and Female

- Incomplete information?
- Extensibility?
- Shared “maleness”?
- Definitions of Man and Woman?
- How can we tell if people are Male or Female in the data?

Modelling Dates

- The data states a date for the occupation
 - Start date?
 - End date?
 - Some kind of duration?
- A simple approach here is to provide a DatatypeProperty that associates the year (as an integer) with the RolePlayed instance
 - An advantage of considering the RolePlayed as an object.
 - Other data types are available. e.g. for dates
- Limitations?

Provenance

- It is often important to maintain the *provenance* of information.
 - Where does this fact come from?
- The data includes this for most of the facts
 - Census Records
 - Birth Records
 - Death Records
 - Marriage Records
- We can provide additional attributes on the RolePlayed Individuals stating where the information came from
- As with Sex there are possible choices
 - Distinct Individuals: Census, BirthRecord, DeathRecord etc.
 - Classes for Source types
 - Classes for Source types with Anonymous Individuals.
 - Would we ever want to name these?

Named or Anonymous RolePlayed Object?

Individual: William_George_Bright_1901

Types: playsRole some (RolePlayed
and hasRole some Butcher
and hasYear value "1929"^^integer
and hasSource some MarriageRecord)

Individual: James_Bright_1809

Facts: playsRole rolePlayed_001

Individual: rolePlayed_001

Types: RolePlayed and (hasRole some Seaman)

Facts: hasYear "1839"^^integer
